# BUYING - CAVITY TRAYS BY CAVITY TRAYS YEovil

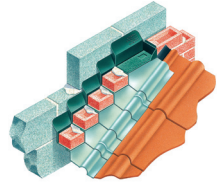

## TYPE C CAVITRAY SYSTEM

For use with lintels over openings and available in many sections including arch styles and special design profiles. These trays also act as a masonry guide, provide the DPC element and are suitable for both traditional or timber frame construction methods.

## TYPE E CAVITRAY SYSTEM

For insertion to existing walls these double brick size (450mm) interlocking refurbishment trays have been designed to be fitted from the outside to provide a horizontal DPC tray in previously unprotected situations, internal and external angles also available to complete the system.

## TYPE X GABLE ABUTMENT TRAYS

This high performance system for pitch roof abutments may be supplied with or without an attached lead flashing, sized to suit thin roof finishes such as slates or larger profiled tiles (shown). Leaded Type X trays are unique and eliminate the need for the usual lead cutting and lead flashing on site. Using preformed cavity trays also eliminates all cutting and wastage of DPC, and also avoids the need to point-in after installation.
